Vesalius, reminding scientists of all fields to open their eyes and to believe nothing that they have not observed themselves—perhaps even encouraging them to present their discoveries creatively, enmeshed in beauty and art.

Acknowledgment
Dr. Malcolm Hast, professor emeritus in Otolaryngology—Head and Neck Surgery at the Feinberg School of Medicine of Northwestern University, and translator and principal investigator on the Vesalius Project, was the faculty advisor for this paper.

A Lost Child
We will know your touch
When the soft, warm sand
Envelops our feet.
And when our fingers
Glide over velvet grass.

We will know your smile
When we see the reflection
Of a sunrise over the ocean.
And when we listen to the wild giggles
Of children at play.

We will see your face
In the commanding colors
Of a lazy sunset.
And in the billowy, puffed clouds
That glide through changing formations.

We will hear your voice
In the soft, rustling of leaves,
The bellowing call of the goose,
The swoosh of a winter squall,
And the quiet sigh of a sleeping child.

You will always be a part of us
As we are a part of each other,
Searching for answers we cannot find,
Daring to love and accepting the risks.
You will always be part of us.

Steven F. Isenberg, MD

Dr. Isenberg (ΩΩA, Indiana University, 1975) is assistant professor of Otolaryngology—Head and Neck Surgery at Indiana University School of Medicine. He is the founder of Medals4Mettle, a nonprofit organization that facilitates the gifting of medals earned by marathon runners and others to patients who are battling disease and handicaps with similar mettle. Physicians around the country distribute these medals to patients. His address is: 1404 North Ritter Avenue, Suite 221, Indianapolis, Indiana 46219. E-mail: sisenberg@good4docs.com.
